

Shelter Use Case: Florida Coast

All along the Florida Coast – year after year -- residents endure hurricanes, and often need shelter.

What if they could have a shelter that was available for these disasters, but that was ALSO useful during good weather, in their backyard.

It would need to be easy to store and set up, portable, fit family and friends, provide the basic necessities AND look cool!

It's here!

Camp On the Lake in Good Weather
AND
Be Prepared for Flooding

Bounce House, Front or Rear Projection Screen

PROBLEM:

- The world is unprepared for disasters.
- Current solutions are slow or very incomplete.

SOLUTION:

A suite of shelters that are designed for air-drop with

- Water and Provisions for 5 Days
- Portable off-grid capabilities

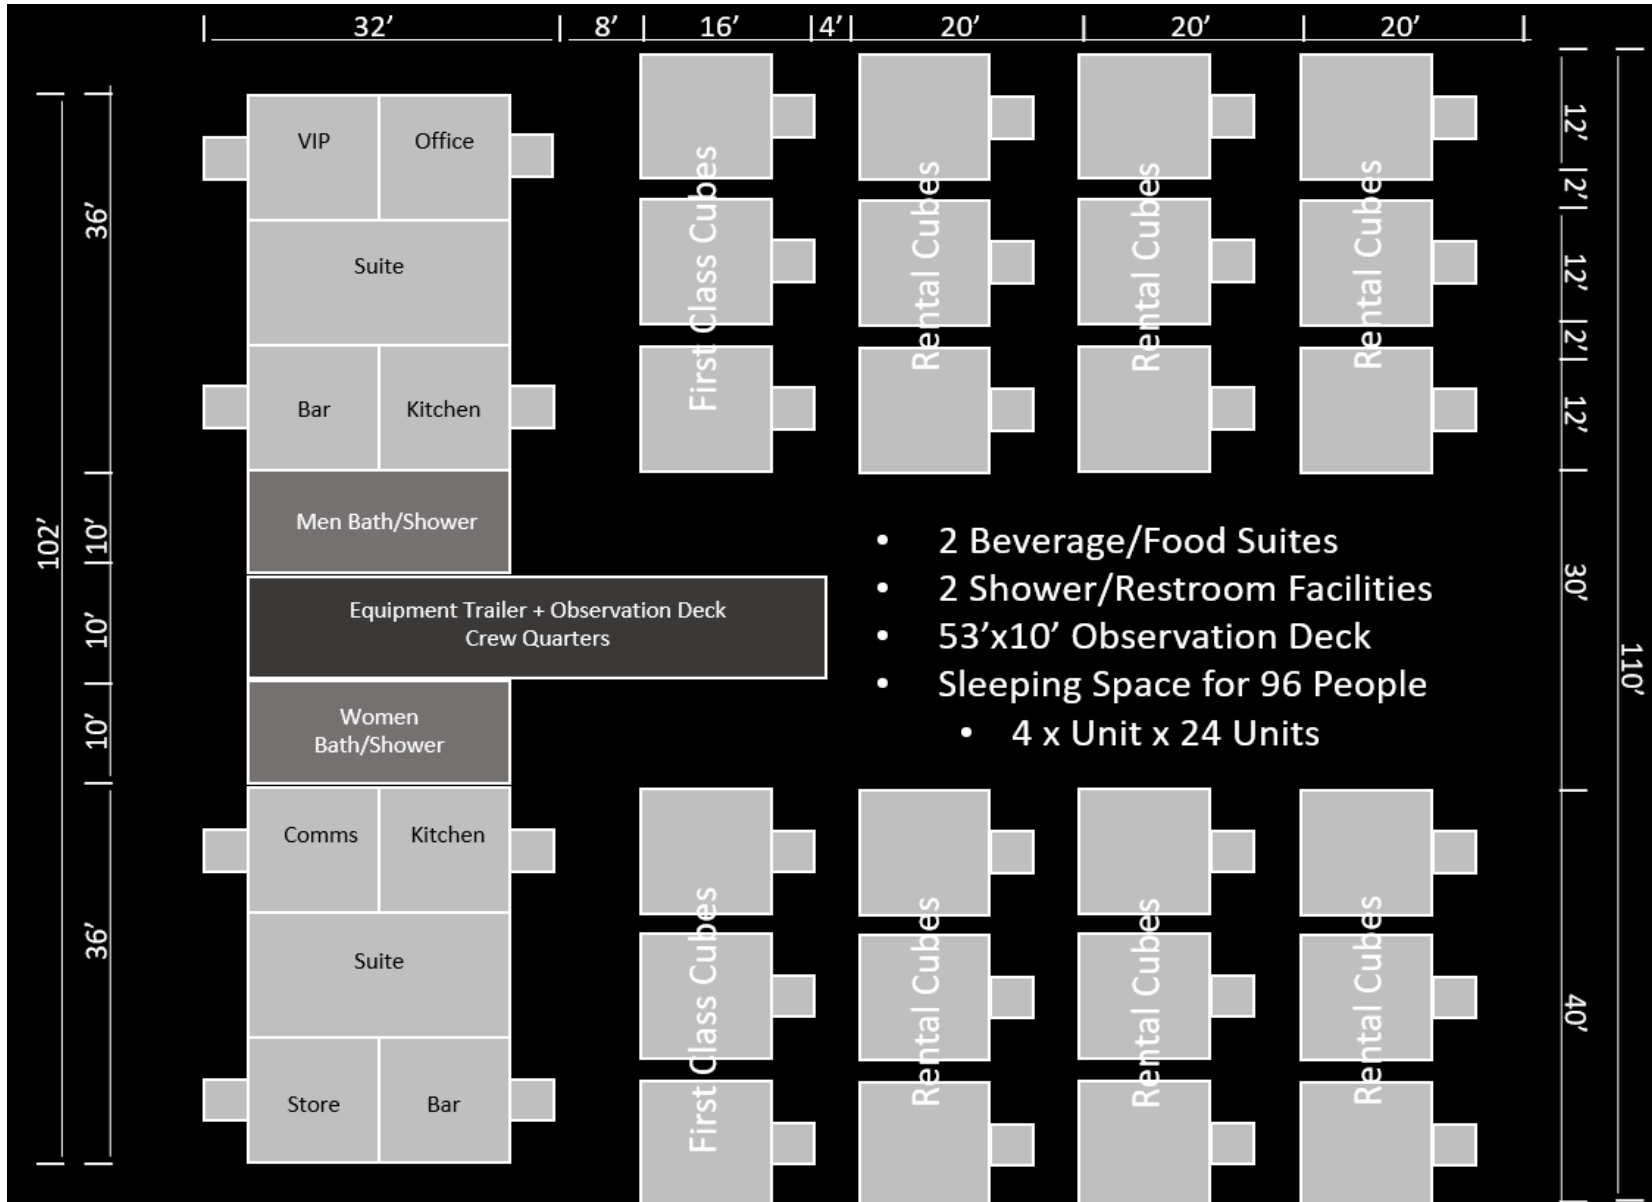

All based upon a unique folding floor providing mobility, storage hatches, drainage for shower and hazmat washdown, etc.

BENEFITS:

Immediate self-sustaining shelter that

- Provides protection from the elements, multi-use and reusable, for recreation or disasters
- Reduces emergency response time/labor and saving lives
- Stacked/storable for years

Large Scale Community Camps

STACK, STORE and PRE-POSITION

Competitive Analysis

CRITERIA: The most important functions of Emergency Shelter Systems are:

Quick to Setup, Durable Stable Floor, Insulation Options, Power and Water, Integrated Systems. **Competitors** include BERG / HDT, Western, Alaska, Out Door Ventures

Most Shelters are:

- Not DiY
- Not portable by 2 people
- Not designed for airdrop and have...
 - No integrated floor
 - No shower
 - No sink
 - No drainage
 - No storage of water
 - No radiant heat
 - No cooling system
 - No solar or off-grid power
 - And are generally not designed for extremes; wind/snow/floods
